

Docker setup for local testing

Open a terminal in the directory on the same directory as the Dockerfile:

```
docker build --no-cache -t upnpd-ctf .

docker run --rm \
  -p 5000:5000/tcp \
  -p 1900:1900/udp \
  upnpd-ctf
```

You can now access the server on UDP/1900 and TCP/5000 respectively.
